Less Pain After Operation	Pain After Operation 2-3 days	No Pain After Operation		
Lumineer	2 Years warranty	No Anesthesia		

LAMINATE VENEER

Laminate veneers are thin porcelain leaf forms attached to the surface of the teeth. Laminates are aesthetic, protective and long lasting restorations that can be performed with 0.3-0.5 mm preparation in the tooth.

DENTAL CROWN

Crowns are bio-compatible restorative materials with very high fracture resistance. It is a substructure material that is compatible with the tissues, does not cause discoloration on the gums, and allows the tooth's aesthetic appearance to be more easily achieved. When crowns need replacement, they can be replaced without damaging the underlying tooth. The most preferred types of crowns are E-max and Zirconia.

DENTAL **BONDING**

sometimes called composite laminate or composite veneers, is a cosmetic dentistry treatment used to enhance your smile. During the procedure, your dentist applies tooth-colored resin material to the affected teeth to change their shape, size or color. No preparation

DENTAL **IMPLANT**

Dental implants are medical devices surgically implanted into the jaw to restore a person's ability to chew or their appearance. They provide support for artificial teeth, such as crowns, bridges, or dentures.

TEETH **WHITENING**

Teeth whitening involves bleaching your teeth to make them lighter. It can't make your teeth brilliant white, but it can lighten the existing colour by several shades.

Frequently Asked Question

What Are The Implants Made Of?

Dental implants are typically made of biocompatible materials that are safe for use in the human body. The most commonly used material for dental implants is titanium, due to its strength, durability, and compatibility with human bone tissue. The surface of the titanium implant is often treated to enhance osseointegration, which is the process by which the implant fuses with the surrounding bone tissue.

Which Implant Brands Do You Use?

Only the best brands:
Ostemm (Korea)
Straumann
Xive (Swiss)

Will I Be Toothless During The Implant Treatment Period?

You will not be completely toothless during the implant treatment period. Before the implant procedure, our doctors will discuss and provide temporary solutions like temporary dentures or bridges. These temporary solutions will enable you to eat and speak normally during the healing period.

How Many Times Do I Need To Visit Istanbul, Turkey For Implant Treatment?

The number of visits and duration of each stay may vary depending on the complexity of the case and individual patient needs. It's best to consult with the dentist to get an accurate estimate of the treatment plan for your specific case.

Are there any side effects to the teeth whitening?

There might be some teeth sensitivity after the procedure. This effect is going to pass away in about 24 hours.
